

A sight to behold

Dell Axim X50v and X50 handhelds deliver state-of-the-art wireless connectivity; enhanced application performance; and large, bright VGA displays to let you work smart and play hard

Seeing is believing, and the new Dell Axim™ X50 handhelds offer an impressive view no matter what your location. Whether at work, at home, or on the road, these sleek Pocket PCs deliver integrated 802.11b Wi-Fi connectivity that lets you check your e-mail, surf the Internet,¹ and download your favorite multimedia without a wired network connection—and provide brilliant VGA displays for a vivid viewing experience.²

Choose from the Axim X50, which features a bright 3.5-inch quarter VGA (QVGA) display with a 240 × 320 resolution. Or see your way to the powerful Axim X50v with its large 3.7-inch VGA display, which provides clear, crisp images at 480 × 640 resolution.

The power to work and play

Axim X50 handhelds provide easy access to entertainment wherever you roam. Both models are powered by the Microsoft® Windows Mobile™ 2003 Second Edition operating system for Pocket PCs, which features Microsoft Windows Media® Player 10 Mobile to let you download high-quality music, movies, and TV shows and to put you a click away from a wide variety of online stores and subscription services. The Axim X50v even provides an Intel® 2700G multimedia accelerator for DVD-quality video playback.

But these versatile handhelds offer more than just fun and games. They also provide the power and storage capacity to run the latest business and productivity applications. The Axim X50v features a 624 MHz next-generation Intel XScale® PXA270 processor with 128 MB flash ROM and 64 MB SDRAM. The Axim X50 is available in two sizes: 416 MHz, which comes with 64 MB flash ROM and 64 MB SDRAM; or 520 MHz, which comes with 128 MB flash ROM and 64 MB SDRAM.

Powerful Axim X50 handhelds not only deliver entertainment and efficiency on the go, they also help keep you going. Both models come with an 1100 mAh battery for hours of operability. An optional 2200 mAh battery extends runtime between charges.

Flexible functionality

Both models offer a stylish design that includes CompactFlash Type II expansion card slots for connecting scanners, Global Positioning System (GPS) receivers, network interface cards (NICs), and other mobile devices. In addition, each unit's headset connection supports voice over IP (VoIP)³ and voice recognition applications, and both models include integrated STMicroelectronics Bluetooth 1.2 technology for hassle-free wireless connection to other devices.
