

# No boundaries

The latest handheld from Dell comes packed with advanced mobility features including dual wireless capability and a revved-up processor

Handheld devices come in small packages, but they offer a big opportunity: total freedom. With built-in Bluetooth® and Wi-Fi® 802.11b wireless connectivity<sup>1</sup>—and an Intel® XScale™ processor designed especially for mobile applications—two new Dell™ Axim™ X30 personal digital assistants (PDAs) deliver plenty of mobility. The Axim X30 packs connectivity, productivity, and entertainment in a sleek, sophisticated design to give both business and personal users the functionality and features they need.

## Connecting wirelessly on the go

Today, it's important to stay connected while on the road; PDA users want the ability to seamlessly get online or swap data with other devices. Two of the new Axim X30 configurations feature a combination of Bluetooth and Wi-Fi wireless technology for flexible connectivity options. The wireless specifications allow you to synchronize your PDA with your notebook or desktop; get online at a Wi-Fi hotspot or through a Bluetooth-enabled mobile phone; and exchange data, such as business cards and documents, with other PDA users. Bluetooth allows personal area networking (PAN) with not only computer systems but also devices such as mobile phones, GPS receivers, keyboards, and other handheld computers. Integrated Wi-Fi enables users to connect wirelessly to the Internet via thousands of hotspots at restaurants and coffee houses, college campuses, sports venues, hotels, airports, and other locations.<sup>2</sup>

## Processing power for mobile users

These days, your handheld needs the processing power to keep pace with usage while you're on the go. The Dell Axim X30 is powered by Intel XScale PXA270 processors, which provide excellent multimedia performance and power-management features that help extend battery life. When configuring the Axim X30, customers choose between two processor speeds: 312 MHz or 624 MHz. For optimum performance, the Intel XScale processor comes with WMMX technology, 32 MB or 64 MB SDRAM, and 32 MB or 64 MB Intel StrataFlash™ ROM.

## Increasing productivity and easy viewing

Offering the same must-have applications you use on your desktop or notebook, the Axim X30 is equipped with the Microsoft® Windows Mobile™ 2003 Second Edition operating system. The Axim X30 comes preinstalled with applications to help maximize user productivity while on the road, including pocket versions of Microsoft Outlook®, Word, Excel, Internet Explorer, MSN® Messenger, Windows Media® player, and more. Windows Mobile 2003 also enables users to switch between portrait and landscape display orientation, and offers other features—such as a 3.5-inch transreflective TFT color display with 240×320 (QVGA) resolution—that enable easy viewing of Web site content. Designed to improve usability and efficiency for users, the Axim X30
