Budget-conscious businesses can still enjoy innovation, even when it comes to everyday tasks like printing

Dell 1600n

Dell 1700n

Now smaller businesses can apply a strategy for low total cost of ownership (TCO) to their printer purchases. The new Dell™ 1700n laser printer is one of the most affordable monochrome laser printers on the market today, offering built-in networking and speeds up to 25 pages per minute (black and white)—perfect for small workgroups or home-office environments.

All about value

Attractively priced, the 1700n delivers workgroup-level performance at an affordable price. In addition to offering high-speed, high-quality laser printing, 1700 series printers include a high-capacity toner cartridge that can help cut per-page costs.

Step up to greater functionality

For an affordable upgrade from the standard Dell 1700 laser printer, the 1700n offers integrated networking capabilities, including a 10/100BaseT Ethernet port that allows multiple users on the network to share printer capabilities. Network functionality also leverages the Dell Toner Management System™, an intelligent monitor that

enables purchasing personnel to receive e-mail alerts when new toner is needed.

Additionally, the 1700n includes the new PostScript®3™ feature, supporting up to 91 scalable PostScript fonts and compatibility with PostScript applications. And the 1700n increases the standard memory of the 1700 model to 32 MB, which can boost printer performance when using Printer Control Language (PCL®) or PostScript applications.

Advantage comes standard

All Dell printers featuring network capabilities include the Dell Printer Configuration Web Tool™ utility, which enables easy installation, configuration, and management of your company's network printers and toner cartridges. This Web-based tool can be instructed to provide automatic e-mail notifications of printer, toner, and paper-handling alerts.

Concerned about maintenance? Don't be. Dell service and support are also part of the package, with extended service offerings available. The Dell Recycling program will even coordinate the pickup and recycling of your old home or office printer, regardless of the manufacturer.

Dell offers another option: 1600n

With speeds as fast as 22 pages per minute (black and white), the compact, easy-to-use Dell 1600n readily tackles requests for laser printing, copying, 24-bit color scanning, and faxing—giving employees the tools they need to perform critical business tasks, all in a single machine. Furthermore, the 1600n is designed to boost productivity without adding bulk. PaperPort Deluxe® 9 software from ScanSoft is included, so users can easily scan and manage documents over the network. And networking comes standard, enabling printer capabilities to be shared by multiple users while the printer itself can be positioned away from individual work areas.

Both the 1600n and 1700n printers are now available in North America and will be offered in other regions later this year.
