Power Data

Idle Category (1S and 2S only)	Category D: Managed Dual Installed Processor (2P) Servers
ENERGY STAR Idle Power Allowance (1S and 2S only)	298
Measured Idle Power (watts)	186.5
Power at Full Load* (watts)	288.2
Benchmark / Method Used for Full Load Test	Sandra Dhrystone isse 4.2
Test Voltage and Frequency for Idle and Full Load Test	115 V/60 Hz
Range of Total Estimated Energy Usage ** (kWh/year)	3,267 to 5,049
Link to Detailed Power Calculator (if available)	WWW.Dell.com/CALC

* Note: Full load power represents the sustained, average power at 100% load of the given workload, and does not necessarily represent the absolute peak power or the highest average, sustained power possible for other workloads.

** Note: Estimated kWh/year gives the absolute range of energy use a user could expect from continuous operation (24x7x365) and ranges from 100% Idle usage to 100% full load operation. The calculation also includes typical data center overhead at a ratio of 1 watt of overhead to every 1 watt of IT load (corresponding to a PUE of 2.0). Closer approximations may be found by using established power calculators and specific information about the intended operating environment (e.g., average time at Idle, data center PUE, etc.)
