- A 64-bit operating system is required to support 4GB or more of system memory.
- Significant system memory may be used to support graphics, depending on system memory size and other factors.
- 1GB means 1 billion bytes and TB equals 1 trillion bytes; actual capacity varies with preloaded material and operating environment and will be less.
- The Dell Precision T3500 uses a very efficient Active Power Factor Correction (APFC) power supply. Dell recommends only Universal Power Supplies (UPS) based on Sine Wave manufacturer to confirm the output type. Dell PCs use Genuine Microsoft Windows.
