

Dell PowerVault DL2100

Powered by Symantec Backup Exec 2010

One of the industry's first and only integrated solution for faster disk-based backups and recoveries with optional deduplication that gets you up and running 5 times faster than configuring it on your own.

Up and running 5x faster

Configuring homegrown backup-to-disk solutions can be difficult, time consuming, prone to errors, and expensive. Dell has simplified the backup process by offering one of the industry's first and only integrated hardware, software, and services solution powered by Symantec Backup Exec™ 2010 software. This integrated backup to disk appliance with target and source based deduplication is a cost-effective way to reduce total cost of ownership.

PowerVault™ DL2100 – Powered by Symantec comes factory installed with Backup Exec™ 2010 software, plus a unique wizard-driven setup and management utility. Integrated automated dynamic disk provisioning configures and sets up the disks for immediate use.

Set it up, configure storage, add more disks – it only takes a few clicks. PowerVault DL2100 solutions are fully tested and validated, sure to work together, and you can deploy them fast.

In fact, we've timed it: You can deploy PowerVault DL2100 – Powered by Symantec Backup Exec 2010 and start executing your first backup in just 18 minutes. That's 5 times faster than setting up and configuring the hardware and software pieces on your own.

Industry leaders Dell and Symantec co-developed this offering to get you up and running fast with a tested solution that offers easier management. It's an ideal way for any IT department to achieve fast, reliable backups and restores. It's disk-based backup simplified by Dell.

55% faster, more reliable disk-based backup and 49% faster restores than tape with up to 50% less cost¹

Managing tapes can be complex and time consuming. Backups to tape often exceed their backup window, and tape-based backups can fail. Disk-based backup with the PowerVault DL2100 – Powered by Symantec Backup Exec is up to 55% faster than tape backups and restores are up to 49% faster.

Better than VTL

Virtual Tape Libraries (VTLs) are "point products" that can help fix backup and recovery bottlenecks in the short run. But they're also separate "boxes" that create silos of information and add management complexity. Virtual tapes have to be created, provisioned, and managed, and VTL products lack alerting and reporting within the backup solution. The PowerVault DL2100 is a native, disk-to-disk solution that is designed to eliminate the need for manual setup and management. It automatically and dynamically provisions disk, invisibly to the user, and gives you proactive monitoring, alerts, and reporting.

Integrated tape support

The PowerVault DL2100 is available with the Dell PowerVault TL2000, TL4000, or ML6000 tape library integrated into the full solution. Take advantage of backup-to-disk for quick availability then transfer to tape from the same management console for offsite disaster recovery.

The PowerVault DL2100 – Powered by Symantec Backup Exec 2010 is the first of Dell's TierDisk family of products, designed to provide cost-optimized solutions for secondary storage environments for data protection and data management.

Remote backup, management, monitoring, and maintenance

Your data center administrators can use the PowerVault DL2100 to backup data from remote offices to the data center. Administrators can set up backup tasks and policies and do system monitoring and maintenance from a central location. This makes the PowerVault DL2100 the ideal backup solution for remote offices that don't have IT experts on-site. You can also use the PowerVault DL2100's remote backup and management features to create a disaster recovery solution, when you transfer data from your data center to another PowerVault DL2100 at a secondary location.

Granular recovery technology for speedy restores

With Symantec Backup Exec's patent-pending Granular Recovery Technology (GRT) for critical Microsoft® applications, including file, Exchange, SharePoint (MOSS), and Active Directory, your administrator can recover granular objects from a single-pass backup by simply browsing and selecting it. GRT lets you recover specific items such as public folders and individual mailboxes – even individual e-mails, attachments, and calendar items – all without a time-consuming full restore.

Protection for VMware virtual machines with low cost and complexity

Managing backups on virtual machines can be difficult and expensive due to licensing requirements. The PowerVault DL2100 – Powered by Symantec Backup Exec 2010 incorporates award-winning technology for virtual machine protection. The Agent for VMware® Virtual Infrastructure includes protection for an unlimited number of guests on an individual ESX host. In addition, Backup Exec 2010 leverages VMware VStorage APIs for off-host backup of VMs.

Protection for desktops and laptops

Backup Exec's 2010 Desktop and Laptop Option (DLO) lets users automatically protect multiple desktops and laptops via a network share. DLO lets users choose continuous, scheduled, or manual backups and provides an intuitive interface that lets users access their most up-to-date data whether they're in the office or on the road.

Lifecycle storage solution support

Choosing the right backup solution is an important step in keeping your critical information safe. Storage Consulting and Deployment from Dell can help you implement, manage, and optimize storage infrastructure as well as backup and recovery in a cost-effective manner, helping to reduce the risk associated with ineffective data management and reduce complexity while improving information availability. Having the right support is also important. Dell ProSupport for IT provides businesses of all sizes with flexible, reliable, and easier support solutions.

The Dell ProSupport for IT service model was designed for IT professionals like you. It provides:

- 7x24 direct access to Dell Expert Centers
- Fast-track dispatch for Dell-certified technicians
- Escalation management through Dell's Global Command Centers

The globally consistent, customer-driven Dell ProSupport for IT portfolio includes proactive support options that align to how you use technology. These enhanced offerings can help you protect your investment, reduce risk, manage complexity, enhance productivity, and guard your sensitive data.

Dell DL2100 — Powered by Symantec Backup Exec 2010 specifications

The software for PowerVault DL2100 – Powered by Backup Exec 2010™ is available in two options:

Backup Exec 2010 DL Edition: Includes Factory Installed Backup Exec Media Server (including the licensing for Continuous Protection Server and connectivity to a single tape drive) and licenses for backing up 2 Windows File Server Agents. This comes with 1 or 3 Years of Software maintenance included.

Backup Exec 2010 DL Edition with Deduplication: Includes Factory Installed Backup Exec Media Server with deduplication (including the licensing for Continuous Protection Server and connectivity to a single tape drive), and licenses for backing up 2 Windows File Server Agents. This comes with 1 or 3 Years of Software maintenance included.

Additional available licenses:

BE 2010 Windows Server Agents: Includes Licenses for backing up two Windows Files Servers.

BE 2010 Linux/Unix Server Agents: Includes Licenses for backing up two Linux/Unix Files Servers.

BE 2010 Email Protection Agents: Includes Licenses for backing up two Email (Exchange or Lotus Domino) Servers.

BE 2010 Database Agents: Includes Licenses for backing up two Database (SQL, Oracle, Sharepoint, and Active Directory) Servers.

BE 2010 Virtual Agents: Includes Licenses for backing up two Virtual Servers (Vmware and/or HyperV). Only one agent is required for every Physical server, with support for unlimited number of virtual servers on the physical server.

BE 2010 Archiving Agents: Includes Licenses for archiving One File Server or Email Server (with up to 50 additional mailboxes).

BE 2010 Library Expansion Option: Includes Licenses for Adding Two additional Tape Libraries to the media server.

BE 2010 Advanced Database Option: Includes Licenses for protecting an advanced database (Oracle RAC or SAP)

BE 2010 Central Management Addon Pack: Includes the license for Central Admin Server Option (the feature allows for centralized management of multiple DL Media Servers)

¹Based on a 20:1 deduplication ratio, 2 Year Analysis Window, GFS Tape Rotation Scheme, initial data protection data starts at 500GB and grows to 1620GB over 2 years. Testing conducted by Principled Technologies sponsored by Symantec Corporation. Actual results will vary with data type, change rates, retention period and back-up methodologies.

Hardware: DL2100	
Value Series	1 x Intel® Xeon® E5520, 2.26Ghz, 8MB Cache
Performance Optimized	2 X Intel® Xeon® E5520, 2.26Ghz, 8MB Cachet
Internal Storage	2x 250GB, 7200 RPM, SATA II Drives in Hardware RAID 1 Configuration for the Operating system and application up to 4X500GB, or 1TB or 2TB, SATA II Drives in Hardware RAID 5 Configuration for the data
Optional Expansion with SAN	Support for MD3000i, CX Arrays or EqualLogic PS Series arrays
Tape Connectivity	SAS 5/E HBA; U320 SCSI HBA; Fiber Channel HBAs: Emulex or QLogic HBAs
Networking	Dual-embedded Broadcom® NetXtreme IITM 5708 Gigabit6 Ethernet NIC with fail-over and load balancing
Operating System	Windows® Server 2008, Standard, x64
Systems Management	OpenManage™, ITA and Dell Management Console
Remote Management	DRAC
Physical Dimensions	2U rack-mountable chassis 26.80" (68.07cm) D x 17.44" (44.31cm) W x 3.40" (8.64cm) H with bezel attached
Rack Weight	57.54 lbs. (26.1 kg), maximum configuration
Ports	Rear: 2 x USB 2.0, 1 x serial connector, 1 x video connector
Optional Expansion with MD1000	
1 X PERC 6E RAID Controller for connecting 6 MD1000 Enclosures (i.e. a total of 90 Drives). One additional PERC card available for purchase – to connect 6 additional MD1000 enclosures (for a total of 180 Drives)
