WHY DELL® — WINDOWS SERVER 2008?

The energy costs, space limitations, and management capabilities that come from server virtualization.

THE EVOLUTION OF SERVER TECHNOLOGY
Windows server™ 2008 is intended to provide increased scalability and control over your server infrastructure. New virtualization tools, Web technologies, and security enhancements help save time and reduces costs, and provide you with increased availability and increased flexibility for your changing business needs.

Windows Server 2008 builds on the success and strengths of Windows Server 2003, but it is much more than a refinement of the previous version. It delivers powerful new functionality that will add real value by simplifying your business operations and improving efficiency. Enhancements are in four key areas:

WEB
Dell is the web expert in delivering increased scalability and reliability, and offers Web Application and Services Platforms, vanquishing server and database problems, and ensuring the safety of your data.

SECURITY
Windows Server 2008 is the most secure Windows Server ever, providing security innovations such as Network Access Protection, Federated Single Sign-On, and Read-Only Domain Controller. Combined with the increased security features of Dell servers — Trusted Platform Modules, Network Interface Cards, Secure Socket Layer (SSL), and Advanced Encryption Standard compliant — you have unprecedented security.

VIRTUALIZATION
Server virtualization is often considered too complex to size correctly. However, Dell has greatly simplified the process, making it easier than ever to protect your data.

With Windows Server™ 2008, you can recoup the operating cycle and take full advantage of the financial and technical benefits of the new functionality.
