

# DELL™ MANAGEMENT CONSOLE

Dell Management Console (DMC), powered by Altiris® from Symantec®, is designed to address everything from basic hardware management applications to advanced enterprise management. DMC provides a single view into the deployment, inventory, monitoring, and updating of your IT infrastructure and creates a foundation for more advanced management functionality.

## SIMPLIFIED INFRASTRUCTURE MANAGEMENT

Dell is transforming a complex, proprietary technology by delivering Dell Management Console, a simple, streamlined, modular solution you can adapt for your data center. An independent study validates the Dell approach. When Dell Management Console was compared to a leading competitor's solution, researchers found that Dell users only needed a single console, whereas the competitor solution may require up to 9 or more consoles.\*

## FLEXIBLE, SEAMLESS, AND SCALABLE

Proprietary management frameworks benefit vendors, not users. Dell's flexible framework allows you to leverage and extend your existing investments. DMC connector capabilities let you share data with other management tools so you can avoid costly systems integration projects.

When management solutions are executed through acquisition, you are responsible for the integration. Dell provides a free, modular platform to deliver basic hardware management that can extend to more advanced functionality with snap-in modules. These modules share the same intuitive interface and data source, so you can easily scale as your needs change. This allows faster time to value and lower overall management costs.

Additionally, Dell Management Console reduces the number of manual processes so you can spend less time and money executing daily tasks. This helps free up resources for more innovative business endeavors.

## COMPREHENSIVE SOLUTION

Rather than overwhelming you with unnecessary data, which complicates troubleshooting and prevents promised automation benefits, Dell Management Console can provide all the information you need to do your job more effectively. Customize the solution to your company's needs and get a centralized IT resource that
