

Compatibility and Interoperability Matrix

P/N 300-008-867
REV A33

December 2012

This compatibility and interoperability matrix provides information on clients, operating systems, platforms, and applications supported by EMC Avamar. Topics include:

Document Update History	2
Overview of EMC Avamar	4
EMC Compatibility Matrix policies and requirements	4
EMC Avamar client-server interoperability	6
EMC Avamar client file system, operating system, and platform compatibility	7
EMC Avamar application compatibility	15
EMC Avamar NAS device (NDMP) interoperability	29
EMC Avamar Push Client Upgrade compatibility	30
EMC Avamar Desktop/ Laptop platform compatibility	31
EMC Avamar Data Domain compatibility	33
EMC Avamar Data Store generation-server software interoperability	35
EMC Avamar Replication interoperability	35
EMC Avamar IOMEGA compatibility	36
EMC Avamar Server operating system and platform compatibility	36
EMC Avamar Browser Compatibility	37
EMC Avamar Virtual Edition for VMware platform compatibility	38
EMC Avamar Data Transport v1.0 Compatibility Matrix	40
EMC Avamar Extended Retention	41
EMC Backup & Recovery Manager v1.0 Compatibility Matrix	65

Document Update History

Revision 1 – April 2012

- First version for Avamar 6.1 release

Revision 2 – May 2012

- File system support identified for cross-platform operating systems (Table 2)
- Clarification of ADT support in Avamar 6.1
- Clarification of DD VTL support for Extended Retention (Table 16)
- Desktop / Laptop browser support for cross-platform OSs updated (Table 6)
- Out of support client versions removed from client server interoperability (Table 1)
- Additions made to the Avamar Extended Retention qualified tape libraries (Table 15)
- Virtualization support for Avamar v6.0 and v6.1 updated (Note 2, page 11)
- Avamar Virtual Edition support matrix corrections and restructured for easier interpretation (Table 13)

Revision 3 – June 2012

- Correction to Novell OES file system support (Table 2)
- File systems hfs added to HP-UX support (Table 2)
- WSS added as a platform for running Avamar Administrator (Table 2)
- Highlighted notes regarding compatibility of DDBoost platforms (Table 7)
- Note regarding patching level of UnixWare 7.1.4 (Table 2)
- Correction to replication compatibility for v6.1 (Table 9)
- Avamar Data Transport / Avamar server compatibility updated
- Avamar Data Transport browser compatibility updated
- Avamar Extended Retention browser compatibility added
- Added VNXe v2.2.0 to NDMP compatibility (Table 4)

Revision 4 – June 2012

- Added Data Domain DDOS 5.2.x to minimum requirements for Avamar 6.1.

Revision 5 – August 2012

- Clarification regarding Avamar SQL Plug-in and Avamar server version compatibility – note to Table 1.
- Added VMware proxy compatibility to Table 1
- Added OES 11 qualification to Table 2
- SLES 11 client library requirements added to Table 2.
- DB2 and Oracle OS compatibilities updated in Table 3
- Operating Systems added to Oracle 11gR1 & 11gR2 compatibility – Table 3.
- Push Client Upgrade compatibility updated – Table 5
- Browser support updated – Table 12.

Revision 6 – September 2012

- Update to Oracle 11gR1 / 11gR2 on HP 9000 (IA-64) platform in Table 3.
- Update to Avamar v6.1 compatibility with GEN2 hardware in Table 8.
- Correction. Dart 5.5 support removed from Avamar v6.1 in Table 4.

Revision 7 – September 13, 2012

- Correction to Table 3

Revision 8 – October 2012

- Additions to Avamar Extended Retention supported tape libraries in Table 15
- ADT browser compatibility updated
- NDMP support clarifications for NetApp added in Table 4

Revision 9 – November, 2012

- Support for Mac OS X 10.8 added to clients and DTLT
- Support for VMware 5.1 added to clients
- Support for Windows Server 2012 added to clients
- Support for Windows Storage Server 2012 added to clients
- Support for Windows 8 added to clients and DTLT
- Support for SQL Server on Windows 2012 added to clients
- Support for VNXe 2.3.0 added to NDMP interoperability
- Avamar Extended Retention Software and Hardware support extensively updated
- EMC Backup & Recovery Manager v1.0 compatibility added

Revision 10 – December, 2012

- Correction to VMware support (2.5.3, 3.0.X, 3.5, 3.5i not supported with Avamar v6.1) in Table 2.
- Note added to Windows Server 2012 – no support for ReFS.
- Lotus Domino 8.5.x support - Operating systems SLES 10 and 32 bit Windows 2003 / 2003 R2 added to Table 3
- SAP with Oracle support - Operating systems Oracle Linux 5, 6 and Solaris 11 added to Table 3
- Sharepoint 2013 support added to Table 3
- Avamar Extended Retention Software Support added – Table 15
- ACSLS Libraries added to Avamar Extended Retention support – Table 19

Overview of EMC Avamar

EMC Avamar® backup and recovery software with integrated source and global data deduplication solves the challenges associated with traditional backup, enabling fast, efficient protection for remote offices, VMware environments, desktop/laptop, applications and data center LAN/NAS servers.

Unlike traditional backup solutions, EMC Avamar identifies redundant data segments at the source (client)—before they are transferred across the network. By moving only new, unique subfile data segments, EMC Avamar delivers fast daily full backups while reducing the required daily network bandwidth by up to 500X. This capability allows companies to utilize existing network bandwidth for backup and disaster recovery of remote offices and data centers, despite slow or congested networks and infrastructure. Data can be encrypted both in flight and at rest for added security, and centralized management makes protecting hundreds of remote offices easy and efficient.

By storing just a single instance of each subfile data segment globally, EMC Avamar also reduces total back-end storage by up to 50X, enabling cost-effective disk-based recovery over extended periods of time.

EMC Compatibility Matrix policies and requirements

Purpose and limitations of this document

This document is for information only and may change at any time. This version supersedes and replaces all previous versions. The information serves only as a guide for those configurations/products that EMC has qualified. This document identifies and lists various vendor host systems and integral components that have been tested and qualified by EMC for use with EMC® products. Vendor components include, but are not limited to, host operating systems, databases, and mail servers. This document also lists various vendors and configurations that EMC has tested or qualified for use with EMC products.

The information included in this document is intended as a guide in the configuration of systems for EMC products. It is not intended to be the sole resource for system configurations. EMC website, other EMC documentation, or relevant vendor documentation, or your EMC Sales or EMC Customer Service representative will provide more information or answers to questions not found in this document.

Policies for qualifying

Policies and procedures for support of EMC products are set forth in the customer's applicable agreements. EMC publication of information relating to system configurations covers only those listed in this document or by approval from EMC Engineering. Other system configurations not found in this document are not qualified without EMC Engineering approval. EMC has qualified hardware and software provided only by the vendors listed in this document. Host systems, hardware and software from other vendors are not qualified, and may never be.

Contact your EMC Sales or EMC Customer Service representative for updates or information not included in this document.

EMC maintains a large collection of the products as well as third-party application software for qualification with EMC backup and recovery systems and to simulate customer environments, but you must consult the vendors for information about their systems.

Policy for future qualification of software releases

The information in this document is maintained by EMC, and EMC strives to update this document with new releases of hardware, operating systems, firmware, BIOS, applications, and so on, as they become available from the vendors. EMC works with the vendors during their development and release processes in order to be fully informed at the time the vendors release new versions. EMC does not announce qualification prior to vendors' general availability; in these cases and in cases where advance preparation is not possible, EMC may test and qualify vendors' products as appropriate after they have been released. For early support of such products including vendor beta participation, contact your EMC Sales or EMC Customer Service representative.

Policy for end-of-life support

EMC strives to continue support for any installed platforms, but may remove support from this matrix for new installations within three months after the vendor has announced that this platform has reached the end of life. EMC will continue support for existing installations of hardware, operating systems, and components that the vendor has officially declared to have reached end of life as long as support is available from the vendor.

EMC Avamar client-server interoperability

Table 1 lists the Avamar client-server interoperability support matrix.

Table 1: EMC Avamar client-server interoperability

	Avamar Server Version			
Avamar client version	4.1	5.0.x	6.0	6.1
4.1.X	X	X	X	
5.0.X	X	X	X	X
6.0.x	X	X	X	X
6.1.X		X	X	X
Avamar VMware Image Proxy				
5.0.X		X	X	
6.0.x			X	X
Avamar VMware FLR Proxy				
5.0.X		X	X	
6.0.x			X	X
Avamar VMware Universal Proxy				
6.1.X			X ¹	X

For the latest Avamar Client Package, there is no need to perform a server upgrade to get the latest client enhancements, as an existing Avamar v5.x or v6.0 server can be upgraded with the new client code. There are a few exceptions to this for the following items:

- VMware vSphere support requires the Avamar 5.0 GA server (build 5.0.0-407 or greater) or later
 - VMware vSphere 4.1 ESX and ESXi support integration requires the Avamar v5.0 SP3 server and the updated VMware proxy client included in the Avamar v5.0SP3 release or later
 - NAT support requires the Avamar 5.0 GA server (build 5.0.0-407 or greater) or later
 - Windows and Mac Desktop and Laptop support requires the Avamar 5.0 GA server (build 5.0.0-407 or greater) or later
 - Localization updates for Desktop/Laptop requires the Avamar v5.0 SP3 server and the updated Desktop/Laptop client(s) included in the Avamar v5.0SP3 release or later
 - The following SQL Plugin features requires Avamar 5.0 Service Pack 1 server (build 5.0.1-32 or greater) or later
 - SQL automated log tail backups, SQL point in time recovery, SQL forced incremental backups
 - The Exchange VSS Plug-in Granular Level Recovery (GLR) feature requires Avamar 6.0 server or later
 - The SharePoint VSS Plug-in requires Avamar 6.0 server or later
 - Data Domain integration requires Avamar 6.0 server or later
 - The Hyper-V VSS, SAP and Sybase Plug-ins require Avamar 6.1 server or later
 - The Avamar 6.1 SQL Plug-in is compatible with Avamar 6.1 Server only. Avamar 6.1 Server is compatible with the Avamar 6.1 SQL Plug-in only.
- ¹. When using the Avamar 6.1 VMware proxy with a v6.0 server, the server must be at SP2 or greater, and only image backups / restores are supported.

EMC Avamar client file system, operating system, and platform compatibility

Table 2 lists the Avamar client file system, operating system, and platform compatibility support matrix. All OS service packs, updates, and patches are supported unless explicitly stated otherwise.

Table 2: EMC Avamar client file system, operating system, and platform compatibility

Operating system	Operating system version	Vendor/platform	OS bit		Avamar Administrator	Avamar versions				Supported File Systems & Notes
			3	6		V4.1	V5.0	V5.0SP2 or later	V6.0	
AIX	5.2, 5.3	IBM System p	X	X		X	X	X	X	jfs, jfs2
	6.1	IBM System p		X		X	X	X	X	
	7.1	IBM System p		X					X	
CentOS	4.x	x86/x64	X	X				X	X	ext2, ext3, ext4
	5.x	x86/x64	X	X				X	X	
	6.x	x86/x64	X	X					X	
Debian	4.x	x86/x64	X	X			X	X	X	ext2, ext3, ext4
	5.x	x86/x64	X	X			X	X	X	
	6.x	x86/x64	X	X					X	
Free BSD	6.2	x86/x64	X	X		X	X	X	X	ufs
	8.0	x64		X					X	
HP-UX	11.0	HP9000 (PA-RISC)	X	X		X		X	X	Vxfs, hfs

SUSE Linux Enterprise Server (SLES)	8	x86/x64	X	X		X	X	X	X		File Systems: ext2, ext3, ext4, reiserfs For SUSE 8, only version 8.2 is supported	
	9	x86/x64	X	X		X	X	X	X	X	ext2, ext3, ext4, reiserfs	
	10	x86/x64	X	X		X	X	X	X	X		
		Linux on System z		X				X	X	X		
	11	x86/x64	X	X			X	X	X	X	File Systems: ext2, ext3, ext4, reiserfs Avamar 6.0 or later supports 32-bit and 64-bit, earlier Avamar versions support 64-bit only Install of libcap.so.1 is required for Avamar 5.0	

EMC Avamar Compatibility and Interoperability Matrix

Operating system	Operating system version	Vendor/ platform	OS bit		Avamar Administrator	Avamar versions					Supported File Systems & Notes
			3 2	6 4		V4.1	V5.0	V5.0SP2 or later	V6.0	V6.1	
											For Avamar 6.0 (and later) SLES11 client on a SLES 11.0 system, the following libraries must be installed: 32-bit systems: libxml2-2.7.6-0.1.37.i586.rpm libxml2-python-2.7.6-0.1.36.i586.rpm 64-bit systems: libxml2-2.7.6-0.1.37.x86_64.rpm libxml2-python-2.7.6-0.1.36.x86_64.rpm
Symantec Enterprise Vault for File System Archiving	8.x, 9.x	x86/x64	X	X					X	X	Supported with Windows Server 2008 x64 and Windows Server 2003 x86/x64 only
Ubuntu	10.04 LTS 10.10	x86/x64	X	X					X	X	ext2, ext3, ext4
	11.x	x86/x64	X	X						X	
VMware ESX	2.5.3, 3.0.X, 3.5, 3.5i	VMware		X		X	X	X	X		Supports ability to perform backups at the VMware virtual machine (VM) guest level.
	4.0	VMware		X			X	X	X	X	Supports ability to perform full VM image backup/recovery (VMDK) and/or guest-level backup.
	4.1	VMware		X			X	X	X	X	
	4.1i	VMware		X			X	X	X	X	
	5.0i	VMware		X				X	X	X	Note: support requires Avamar 5.0SP3 or later
	5.1	VMware		X						X	Does not support the following features: <ul style="list-style-type: none">• Sparse Disks• Prepare for access
Windows	Windows	x64		X	X					X	Support requires Avamar Client

EMC Avamar Compatibility and Interoperability Matrix

Operating system	Operating system version	Vendor/platform	OS bit		Avamar Administrator	Avamar versions					Supported File Systems & Notes
			3 2	6 4		V4.1	V5.0	V5.0SP2 or later	V6.0	V6.1	
Windows Server 2012	Server 2012										6.1SP1 or later Includes Foundation, Essentials, Standard and Datacenter Editions. Includes support for Windows Server Core installation option, Avamar Administrator support requires 6.0 and is not supported on Server Core. No support for Scale-out file servers No support for ReFS
	Windows Server 2012 Failover Cluster	x64		X	X					X	Support requires Avamar Client 6.1SP1 or later Includes Foundation, Essentials, Standard and Datacenter Editions. Includes support for n-node active/passive and active/active cluster configurations. Includes support for Windows Server Core installation option, Avamar Administrator not supported on Server Core. No support for ReFS
	Windows 8	x86/x64	X	X	X					X	Support requires Avamar Client 6.1SP1 or later Windows 8 Basic, Pro & Enterprise Editions supported
	Windows Server 2008 R2	x64		X	X				X	X	Includes Standard, Enterprise, and Datacenter Editions. Includes support for Windows Server Core installation option, Avamar Administrator support requires 6.0 and is not supported on Server Core.
	Windows Server 2008	x64		X	X				X	X	X

EMC Avamar Compatibility and Interoperability Matrix

Operating system	Operating system version	Vendor/ platform	OS bit		Avamar Administrator	Avamar versions					Supported File Systems & Notes
			3 2	6 4		V4.1	V5.0	V5.0SP2 or later	V6.0	V6.1	
	R2 Failover Cluster										Includes support for n-node active/passive and active/active cluster configurations. Includes support for Windows Server Core installation option, Avamar Administrator not supported on Server Core.
	Windows Server 2008 (RTM, SP2)	x86/x64	X	X	X	X	X	X	X	X	Includes Web, Standard, Enterprise, and Data Center Editions. Support for Windows Core installation option requires Avamar v5.0.105 release. Avamar Administrator not supported on Server Core. Support for Windows Server 2008 Disaster Recovery requires Avamar v5.0.105 release,
	Windows Server 2008 -Failover Cluster (RTM, SP2)	x86/x64	X	X	X	X	X	X	X	X	Includes Enterprise and Data Center Editions. Support for Windows Core installation role requires Avamar v5.0.105 release, Avamar Administrator not supported on Server Core. Includes support for n-node active/passive and active/active cluster configurations.
	Windows Server 2003 R2, SP2 or later	x86/x64	X	X	X	X	X	X	X	X	Includes Web, Standard, Enterprise, and Data Center Editions.
	Windows Server 2003 SP1 or later	x86/x64	X	X	X	X	X	X	X	X	Includes Web, Standard, Enterprise, and Data Center Editions.
	Windows Cluster Server 2003 R2, SP2 or later	x86/x64	X	X	X	X	X	X	X	X	Includes Enterprise, and Data Center Editions. Includes support for n-node active/passive and active/active cluster

EMC Avamar Compatibility and Interoperability Matrix

Operating system	Operating system version	Vendor/platform	OS bit		Avamar Administrator	Avamar versions					Supported File Systems & Notes	
			3 2	6 4		V4.1	V5.0	V5.0SP2 or later	V6.0	V6.1		
											configurations.	
Windows Cluster Server 2003	x86/x64		X	X	X	X	X	X	X	X	Includes Enterprise, and Data Center Editions. Includes support for n-node active/passive and active/active cluster configurations.	
Windows 7	x86/x64		X	X	X			X	X	X	Windows 7 Professional, Ultimate and Enterprise Editions supported	
Windows Vista	x86/x64		X	X	X	X	X	X	X	X	Windows Vista Basic, Premium, and Enterprise are supported. Vista support is for file systems only.	
Windows XP	x86/x64		X	X	X	X	X	X	X	X	Both Windows XP Professional and XP Home are supported clients; Avamar Administrator requires minimum of SP1. The backup of data resident on disks encrypted by using non-Microsoft EFS disk encryption software is not supported.	
Windows Storage Server	Windows Storage Server 2012	x64			X						X	
	Windows Storage Server 2008 R2	x64			X	X				X	X	Single Instance Storage (SIS) and clustering are supported
	Windows Storage Server 2008	x64			X	X				X	X	Single Instance Storage (SIS) and clustering are supported
	Windows Storage Server 2003 R2	x86, x64	X	X	X					X	X	Single Instance Storage (SIS) is not supported

Notes:

- 1. System State Backup & Recovery** — supported only on Windows, RHEL, SLES, and Solaris platforms.
SLES support is available in Avamar 6.1 or later.

2. Virtualization support — EMC Avamar supports guest-level backups of virtualized environments on all major virtualization platforms to the extent that they support the environments natively. This includes file system backups and applications. Major virtualized platforms are currently defined as VMware, Hyper-V, Xen, Solaris/OpenSolaris Container/Zones, Oracle VM Server for SPARC (LDOM), HP nPAR, KVM and AIX/Linux LPAR.

- Avamar 5.0 and 5.0SP1 are compatible with VMware vCenter v4.0.0 and v4.0 Update 1
- Avamar 5.0SP2 is compatible with VMware vCenter v4.0.0, v4.0 Update 1 and v4.0 Update 2
- Avamar 5.0SP3 is compatible with VMware vCenter v4.0.0, v4.0 Update 1, v4.0 Update 2, v4.1 and v4.1i
- Avamar 6.0 is compatible with VMware vCenter v4.0.0,v4.0 Update1, v4.0 Update 2, v4.1,v4.1i,v5.0,v5.0 Update 1, v5.0i,v5.0i Update 1
- Avamar 6.1 is compatible with VMware vCenter v4.0.0,v4.0 Update1, v4.0 Update 2, v4.1,v4.1i,v5.0,v5.0 Update 1, v5.0i,v5.0i Update 1

EMC Avamar application compatibility

Table 3 lists the Avamar application compatibility support matrix. All OS service packs, updates, and patches are supported unless explicitly stated otherwise. The Avamar client and the Avamar application plug-ins installed on each host must be the same version number.

Table 3: Avamar application compatibility

Application Plug-In	App version	App bitness		Hardware platform	Operating system	OS bit		Avamar version				Notes
								V4.1	V5.0	V5.0SP2 or later	V6.0	
		3	6			2	3	4	2	3	4

Avamar SharePoint Plug-in						
Avamar SQL Plug-in				X	X	See note 5 & 6
Avamar Hyper-V VSS Plug-in					X	See note 6
Avamar Oracle Plug-in				X	X	See note 5 & 6
Avamar IBM DB2 Plug-in					X	See note 6
Avamar Lotus Plug-in						
Avamar SAP with Oracle Plug-in					X	See note 6
Avamar Sybase ASE Plug-in					X	See note 6
Avamar VMware				X	X	See note 5 & 6

Notes

1. Avamar 6.1 requires Data Domain DDOS 5.0.x (minimum 5.0 version is 5.0.2.3), 5.1.x or 5.2.x
2. Avamar 6.0 requires Data Domain DDOS 4.9.x (minimum 4.9 version is 4.9.2), 5.0.x (minimum 5.0 version is 5.0.2.3) or 5.1.x
3. Avamar support for Data Domain System backups requires Avamar Server 6.0 or later
4. SQL x64 is supported on x64 OS only
5. For environments with Avamar clients running v6.0.x , application plug-ins used in conjunction with DDBoost for backup and restore with a Data Domain target system must be used on a host platform supported by DDBoost v2.3.x. See the Data Domain Boost Compatibility List for details.
6. For environments with Avamar clients running v6.1.x , application plug-ins used in conjunction with DDBoost for backup and restore with a Data Domain target system must be used on a host platform supported by DDBoost v2.4.x. See the Data Domain Boost Compatibility List for details.

EMC Avamar IOMEGA compatibility

[Table 10](#) lists the Avamar compatibility support matrix for IOMEGA

Table 10: EMC Avamar IOMEGA compatibility

IOMEGA Model	Avamar client versions					Notes
	V4.1	V5.0	V5.0SP2 or later	V6.0	V6.1	
Iomega StorCenter ix12-300r NAS			X	X	X	Backups of databases and applications using this client are not supported
IOMEGA StorCenter px4-300d				X	X	Backups of databases and applications using this client are not supported
IOMEGA StorCenter px4-300r				X	X	Backups of databases and applications using this client are not supported
IOMEGA StorCenter px6-300d				X	X	Backups of databases and applications using this client are not supported
Iomega StorCenter px12-350r NAS				X	X	Backups of databases and applications using this client are not supported

EMC Avamar Server operating system and platform compatibility

[Table 11](#) lists the Avamar Server operating system and platform compatibility support matrix.

Table 11: EMC Avamar Server operating system and platform compatibility

Operating system	Operating system version	Platform	OS bit		Avamar Server	Min. Avamar version	Notes
			32	64			
Red Hat Enterprise Linux AS/ES	V4.0	AMD64/EMT64T		X	X	5.0	GEN 3 Hardware requires Update 8. Gen2 and 1 hardware require Update 6.
SUSE Linux Enterprise Server	11SP1	AMD64/EMT64T		X		6.0	GEN4 hardware only. Earlier generations should continue to run RHEL as the server operating system
SUSE Linux Enterprise Server	11SP1	AMD64/EMT64T		X		6.1	GEN4 hardware only. Earlier generations should continue to run RHEL as the server operating system

EMC Avamar Browser Compatibility

Table 12 lists the Avamar supported web browsers for all web enabled features

Table 12: EMC Avamar Browser compatibility

Operating system	Operating system version	Hardware platform	OS Bit		Supported browser(s)	Avamar versions					Notes
			3	6		v4.1	v5.0	v5.0 SP1	v6.0	v6.1	
Windows	Windows 8 Basic, Pro & Enterprise Editions	x86/x64	X	X	Internet Explorer 10 Firefox 15.x					X	Support requires Avamar Client 6.1SP1 or later
	Windows 7 Ultimate, Professional, & Enterprise Editions	x86/x64	X	X	Internet Explorer 9 Internet Explorer 8 Firefox 7.x-11.x			X	X	X	
	Windows Vista Ultimate & Business Editions SP 1 and above	x86/x64	X	X	Internet Explorer 9 Internet Explorer 8 Internet Explorer 7 Firefox 7.x-11.x		X	X	X	X	The recommended minimum hardware configuration for Windows clients is 1GHz processor and 1GB RAMf2429
	Windows XP Professional SP 2 and Above	x86/x64	X	X	Internet Explorer 8 Internet Explorer 7 Internet Explorer 6 Firefox 7.x-11.x		X	X	X	X	The recommended minimum hardware configuration for Windows clients is 1 GHz processor and 1 GB RAM
Mac OS X	10.4.11 through 10.5	Intel	X	X	Safari 3.1 Safari 4.0		X	X	X	X	
	10.6	Intel		X	Safari 3.1, 4.0, 5.x			X	X	X	
	10.7	Intel		X	Safari 3.1, 4.0, 5.x				X	X	
	10.8	Intel		X	Safari 6.x					X	Requires v6.1 SP1 or higher.

EMC Avamar Virtual Edition for VMware platform compatibility

Table 13 lists the Avamar Virtual Edition (AVE) and platform compatibility support matrix.

Table 13: EMC AVE platform compatibility

AVE Version	AVE Platform Requirements	AVE License Capacity			Notes	
		0.5 TB AVE	1 TB AVE	2 TB AVE		
All Versions	I/O Requirements	Must pass benchmark test			Benchmark tool and instructions provided in AVE download package must pass minimum requirements for: <ul style="list-style-type: none">▪ Sequential Write performance▪ Sequential Read performance▪ Random Read Seek performance	
AVE 6.1	Supported VMware Hosts	VMware ESX Server 4.1, 4.1i & 5.0i				
	Dedicated Processors	Min two x 2GHz				
	Dedicated Physical Memory	6GB	8GB	16GB		
	Disk Space	850GB	1600GB	3100GB		
AVE 6.0	Supported VMware Hosts	VMware ESX Server 4.0, 4.0i, 4.1, 4.1i & 5.0i				
	Dedicated Processors	Min two x 2GHz				
	Dedicated Physical Memory	3GB	4GB	16GB		
	Disk Space	815GB	1565GB	3065GB		
AVE 5.0.2 & AVE 5.0.3	Supported VMware Hosts	VMware ESX Server 3.5, 3.5i, 4.0, 4.0i, 4.1, 4.1i & 5.0i				
	Dedicated Processors	Min two x 3GHz				
	Dedicated Physical Memory	3GB	4GB	16GB		
	Disk Space	785GB	1560GB	3000GB		
AVE 4.1.2	Supported VMware Hosts	VMware ESX Server 3.5, 3i, 4.0 and 4i			AVE 4.1.2 includes an OS upgrade that addresses an ESX 4.0 compatibility issue.	
	Dedicated Processors	Min two x 3GHz				
	Dedicated Physical Memory	3GB	4GB	16GB		
	Disk Space	785GB	1560GB	3000GB		

Notes:

1. Client compatibility for AVE is the same as like versions of Avamar Server (see Table 1)
2. Configuration options:
 - The 0.5 TB and 1 TB AVE support a maximum of two independent AVE instances on a single ESX host.
 - The 2 TB AVE supports a maximum of one independent AVE instance on a single ESX host.
3. Supports VMware environments where VMotion is enabled
4. Stated physical memory requirements do not include physical memory required to accommodate other Guests, Hypervisor, and Console Services.
5. Physical disk space utilized by AVE; partitioned according to AVE specifications.
6. Minimum network connection: 1GbE

EMC Avamar Data Transport v1.0 Compatibility Matrix

Avamar Server Compatibility

Avamar Data Transport (ADT) interfaces with existing Avamar Servers as the source of content to export. ADT supports the following Avamar Server software versions (inclusive of Customer-owned equipment, Data Store, or AVE):

- Avamar Server v4.1.0, v4.1.1 and v4.1.2
- Avamar Server v5.0.0 and v5.0 SP1-SP4
- Avamar Server v6.0, v6.0 SP1-SP2
- Avamar Server 6.1 and v6.1 SP1 (requires ADT 1.0 SP3 or later)

Virtualization platform compatibility

ADT runs on a virtualized platform. ADT supports the following virtualized platforms:

- VMware ESX Server v3.5
- VMware ESX(i) Server v4.0
- VMware ESX(i) v4.1 (Requires ADT 1.0SP2 or later)

Note: All Editions of VMware supported.

Tape Management System compatibility

Table 14 lists the ADT interfaces with existing Tape Management Systems to export data onto tape. ADT supports the following versions of EMC NetWorker® and NetBackup running on the listed operating systems only:

Table 14: Tape Management System compatibility

	Windows Server 2003	Windows Server 2008	Solaris 10	Linux
NetWorker 7.6 or higher	X	X	X	X
NetWorker 7.6 SP1 (Japanese)			X	
NetWorker 7.5 SP1 or higher	X	X	X	X
NetWorker 7.4 SP5 (Japanese)			X	
NetWorker 7.4 SP4	X	X	X	X
NetBackup 7.1		X	X	X
NetBackup 7.0		X		X
NetBackup 6.5.5	X	X	X	X
NetBackup 6.5.3	X	X	X	X
NetBackup 6.5.2A	X		X	X

Browser compatibility

ADT is fully configured and managed through a web interface. ADT supports the following web browsers:

- Internet Explorer 7, 8 (Windows) and Firefox 3 - 13 (Windows, Linux), Google Chrome 21.

EMC Avamar Extended Retention

Avamar Server Compatibility

Avamar Extended Retention interfaces with existing Avamar Servers as the source of content to export. Avamar Extended Retention supports the following Avamar Server software versions (regardless of platform generation or AVE):

[Table 15](#) lists the Avamar Extended Retention Software Support

Table 15: EMC Avamar Extended Retention Software Support

Avamar Extended Retention Version	Avamar Server Version
v1.0	v6.1
v1.1	v6.1 and v6.1 SP1

Note: if multiple Avamar servers are used with a single Media Access Node, all Avamar servers must be at the same and latest software version in order to take advantage of all Extended Retention functionality.

Avamar Server Hardware Platform Compatibility

Avamar Extended Retention supports installation on the following Avamar hardware platforms:

[Table 16](#) lists the Avamar Extended Retention Hardware Platform Support

Table 16: EMC Avamar Extended Retention Hardware Platform Support

Hardware Platform	Avamar Extended Retention Version
Avamar GEN4 Media Access Node	v1.0 and v1.1
Avamar GEN4S Media Access Node	v1.1

[Table 17](#) lists the Avamar Gen4S Media Access Node Verified Supported 10GbE SPF+ Module

Table 17: EMC Avamar Gen4S Media Access Node 10GbE SPF+ Module Support

Name	Description	Product Code
Intel® Ethernet SFP+ SR Optics	Dual Rate 10GBASE-SR/1000BASE-SX	E10GSFPSR

[Table 18](#) lists the Avamar GEN4S Media Access Node Verified Supported 10GbE Cables

Table 18: EMC Avamar GEN4S Media Access Node 10GbE Cable Support

Type	Make	Product Code	Length
Twinaxial	Intel	Ethernet SFP+ Twinaxial Cable Passive	5M
Twinaxial	Cisco	Cisco SFP-H10GB-CU5M 10GBase-CU SFP+ twinax Cable	5M
Fiber	Opticon	50/125 10 Duplex LC-LC fiber cable	10M
Fiber	Opticon	50/125 10 Duplex LC-LC fiber cable	25M

NOTE: The Avamar GEN4S Media Access Node with 10GbE does not include SFP+ GBICs or cabling. The GBICs and Cabling referenced above have been tested and are fully supported.

Browser compatibility

Avamar Extended Retention is fully configured and managed through a web interface. Avamar Extended Retention supports the following web browsers:

- Internet Explorer 7, 8 (Windows) and Firefox 3 - 10 (Windows, Linux)

Table 19 lists the Avamar Extended Retention supported tape libraries

Table 19: EMC Avamar Extended Retention supported tape libraries

EMC Avamar Extended Retention Table Footnotes

- 1 HP D2D VTL devices were qualified with a QLogic 4000 series hardware initiator.
- 2 To avoid potential problems with interchanging tapes between 9840A, 9840B, and 9840C drives in a mixed shop, all 9840A drives must have 1.33.109 code or higher installed, and all 9840B drives must have 1.33.309 code or higher installed, prior to installation of any 9840C drives.
- 3 LTO-4/5 tape drives with out-of-band Key Management do not require integration with extended retention.
- 4 Drive emulations: LTO-2, LTO-4, 9840B, 9840D, 3590, and Mammoth-2. Up to 1.500.000 virtual volumes. Virtual volume size from 1GB to 200 GB. Silo emulations: DAS V3.1, ACSLS. Silo interfaces not supported on W2k3 x64 and W2k8 x64. The maximum tape block size supported by the virtual drives is 256k, check device resource attribute "device block size". The device resource attribute "volume default capacity" should be set according to the virtual volume size. Jukebox resource attributes "load sleep", "eject sleep", and "unload sleep" should be set to 1.
- 5 Use license bundle 457-100-038 when library type option is 'Sun 3.15'. Use license bundle 457-100-013 for all other library type options (i.e. L180, SL500, L700, etc.)
- 6 For IBM tape drives on Linux, native "st" driver was used for qualification testing. IBM Tape Driver on Linux is NOT supported and under certain conditions may cause tapes to be overwritten.
- 7 The use of LTO-4/5 hardware-based encryption is supported by extended retention when controlled by management utilities that are provided with the LTO-4/5 hardware, or by third-party key management software. EMC does not test or certify these key management utilities; however, extended retention can read from and write to LTO-4/5 devices that use hardware-based encryption and the use of this encryption is transparent to extended retention. Neither the encryption nor the key management

processes are managed by the extended retention. This includes the ability to turn encryption off/on within extended retention and the management of encryption keys.

- 8 Support NAS (CIFS & NFS) backup target.
- 9 For an IBM TS3500 (3584) multiframe jukebox with LTO drives installed, the tape drives have to be in a contiguous sequence.

EMC Backup & Recovery Manager v1.0 Compatibility Matrix

EMC Backup & Recovery Manager is a cross product solution that supports Avamar, NetWorker and Data Domain.

Avamar Server Compatibility

Backup & Recovery Manager interfaces with existing Avamar servers as the source of content for monitoring and reporting. Backup & Recovery Manager supports the following Avamar Server software versions:

- Avamar Server v6.0 SP2
- Avamar Server 6.1 GA Refresh (6.1.0-402)
- Avamar Server 6.1 SP1

Virtualization platform compatibility

The Backup & Recovery Manager server runs on a virtualized platform. The following virtualized platforms are supported:

- VMware ESX v4.0 or later
- VMware ESXi v4.0 or later

Note: All Editions of VMware supported.

NetWorker compatibility (NetWorker compatibility shown so that Avamar customers who also use NetWorker can see all compatibility in one location)

Backup & Recovery Manager interfaces with existing NetWorker servers as the source of content for monitoring and reporting. Backup & Recovery Manager supports the following NetWorker server versions:

- NetWorker 7.6 or later

Supported NetWorker environments

The Backup & Recovery Manager NetWorker adaptor can be installed on NetWorker Windows or Linux servers. Other NetWorker environments (for instance, NetWorker installed on Solaris, HP-UX, AIX, etc) are supported by installing the Backup & Recovery Manager NetWorker adaptor on a supported (Windows or Linux) proxy server.

Browser compatibility

Backup & Recovery Manager is accessed through a browser interface. Backup & Recovery Manager supports the following browsers:

Browser	Version
Internet Explorer	Version 8 or higher
Firefox	Version 5.x or higher
Safari	Version 4 or higher
Chrome	Version 19 or higher
