

如何收集 M1000E CMC 日志

1. 开启 CMC 的 telnet 功能

The screenshot shows the Dell Chassis Management Controller (CMC) web interface. The top navigation bar includes 'Network' (2) and 'Services' (3). The left sidebar shows 'Chassis Overview' (1) and a tree view of server components. The main content area is titled 'Telnet Configuration' and contains a table with the following data:

Attribute	Value
Enabled	<input checked="" type="checkbox"/> (4)
Max Sessions	4
Idle Timeout (0, 60-10800)	1800 seconds
Port Number (10-65535)	23

2. 下载 putty 工具，设置如下保存日志

The screenshot shows the PuTTY Configuration dialog box. The 'Logging' option under the 'Session' category is selected. The 'Options controlling session logging' section shows 'All session output' selected. The 'Log file name' field is set to 'D:\cmclog.txt'.

Category: Session

- Logging

Options controlling session logging

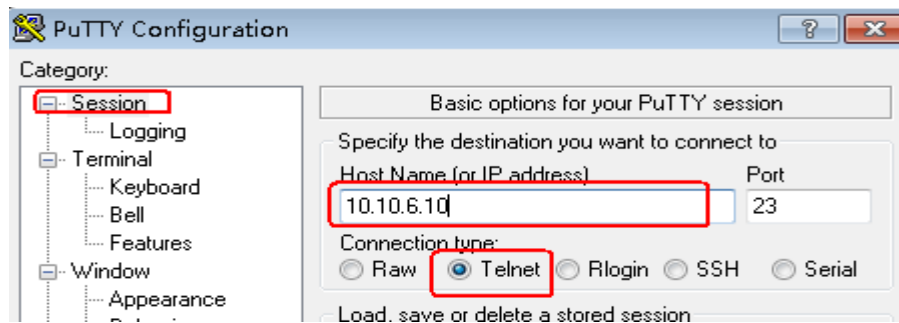

Session logging:

- All session output
- None
- Printable output
- SSH packets
- SSH packets and raw data

Log file name: D:\cmclog.txt [Browse...]

(Log file name can contain &Y, &M, &D for date, &T for time, and &H for host name)

3. 输入 CMC 的 IP 地址，使用 telnet 方式连接

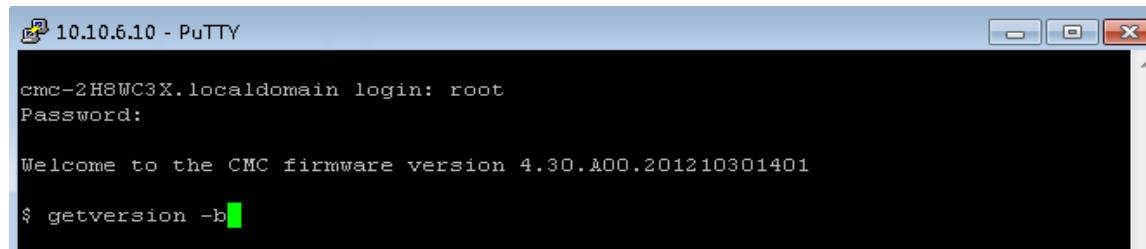

4. 登陆后依次输入如下命令，命令执行完毕后，把 D:\盘下的 cmclog.txt 文件发给技术支持工程师。

```
getversion -b
```

```
getversion -l （注：这个参数是小写的 L）
```

```
racdump
```

```
dumplogs
```

另外如果系统自带 telnet，也可以用如下方式 telnet 上去后执行命令收集。
