

Reduce backup and recovery time for SQL Server and Oracle databases with Dell EMC Integrated Data Protection Appliance

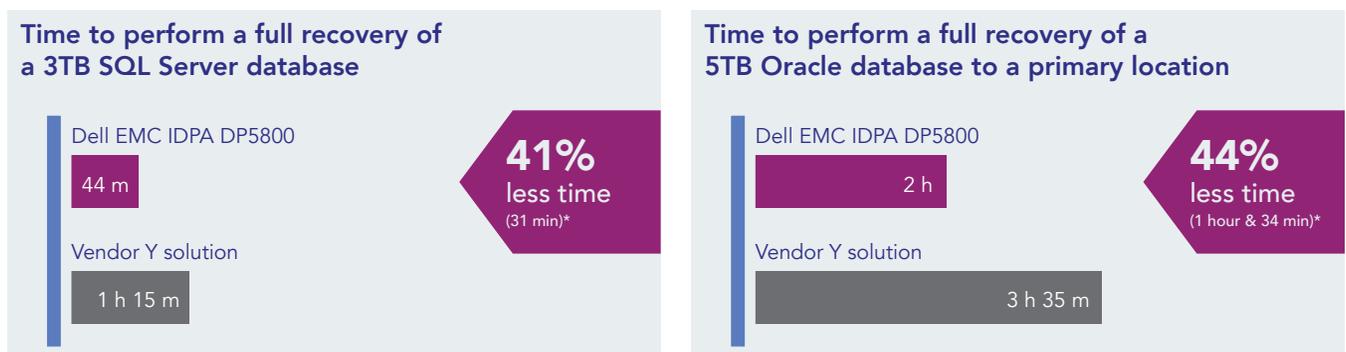

For large Oracle® and Microsoft SQL Server databases, we simulated a seven-day backup scenario and performed recovery testing using

- ▶ A Dell EMC™ Integrated Data Protection Appliance (IDPA) DP5800-based solution
- ▶ A similarly sized solution from a key competitor we call "Vendor Y"

The Dell EMC IDPA solution backed up large databases in a fraction of the time...

...and cut recovery time by up to 1 hour and 35 minutes.

Read our full report to learn more about how the smaller backup and recovery windows you get with the Dell EMC IDPA can help your company:

Restore affected applications and recover data sooner

Minimize downtime spent on data recovery, promoting greater uptime and operational continuity

Set shorter recovery point objectives (RPOs) and recovery time objectives (RTOs)
