1 Based on testing by Dell Labs in January 2009.  
2 Maximum memory with dual processors installed. A 64-bit operating system is required to support 4GB or more of system memory.  
3 Significant system memory may be used to support graphics, depending on system memory size and other factors.  
4 GB means 1 billion bytes and TB equals 1 trillion bytes; actual capacity varies with preloaded material and operating environment and will be less. With Dell Factory Image Restore installed, Windows Vista users will have 10GB of their hard drive capacity set aside for a recovery image.  
5 The Dell Precision T5500 uses a very efficient Active Power Factor Correction (APFC) power supply. Dell recommends only Universal Power Supplies (UPS) based on Sinewave output for APFC UPSs, not an approximation of a Sinewave, Square Wave or quasi-Square Wave (see UPS Technical Specifications). If you have questions, please contact the manufacturer to confirm the output type.  
6 For a copy of Ltd. hardware warranty, please write Dell U.S.A. L.P., Attn: Warranties, One Dell Way, Round Rock, TX 78682 or see www.dell.com/warranty.
